There also was an RS-6A, which used the RT-6A and RR-6A. The only big difference is that the RS-6A tunes 4.5-22 MHz, whereas the RS-6 tunes 3-

Питание 12 или 24 VDC. Использовался в составе авиационной радиостанции AN/ARC-4; в составе (основной компонент) мобильной радиостанции флота МАН. "RT-19/ARC-4. 140 to 144 Mc AM, 12 or 24 volts d-c. VHF transmitter and a VHF receiver mounted on a single chassis. Both the transmitter and receiver may be pre-tuned for operation on any four crystal controlled frequencies in the 140 to 144 Mc band. One of the four frequencies is intended for plane-to-plane communication. The remaining frequencies are intended for plane-to-ground communication". "The Receiver-Transmitter AN/ARC-4/RT-19 (WE-233)... It is intended for two way radio-telephone communication between airplanes and from airplanes to ground stations. It also provides an interphone system for the pilots. The equipment consist of a VHF transmitter and a VHF receiver mounted on a single chassie. Both the transmitter and the receiver may be pre-tuned for operation on any four crystal controlled frequencies in the 140 to 144 Magacycles. One of the four frequencies is intended for plane-to-plane communication. The remaining frequencies are intended for plane-to-ground communication. A transmitter crystal and receiver crystal are mounted in a single crystal holder and are so selected that the transmitter and the receiver both operate on the same carrier frequency. Crystal switching relays incorporated in the equipment permit the rapid selection of any of the four pre-tuned carrier frequencies. The radio receiver has two independent r-f input circuits which permit simultaneous monitoring on two carrier frequencies. One input circuit may be used to monitor continuously on the plane-to-plane carrier frequency. The other input circuit may be used simultaneously to monitor any one of the plane-toground frequencies. Provision is made to temporarily disable either circuit if two signals are received at the same time".

Армия США, КМП США. The SB-3865 is a 4-wire digital, 30-line, TRI-TAC compatible switchboard. Up to three units can be stacked together to operate as one unit providing 90 lines. Each 3865 has three group modems, one of which can be encrypted. Group rates can range up to 576 Kbps, and can be run at 16 or 32 Kbps. The 3865 can be operated in stand-alone mode, or in conjunction with the TTC-39 as a COMSEC Subordinate Switch (CSS). In the CSS mode, 3865 subscribers have access to the same features as TTC-39

subscribers. The 3865 can provide digital non-secure and digital secure phones, although use of secure phones without a COMSEC parent switch requires each phone use the same keys. Dialing is automatic and does not require operator assistance in a digital network. The SB-3865 can also be operated in conjunction with the SB-3614 analog switchboard in a hybrid stack configuration for greater flexibility. U/W AN/TTC-39, AN/TTC-42.

T-1687/ALE-70(V) - волоконно-оптическая буксируемая ловушка (буксируемый передатчик помех) [EW Towed Decoy; Fiber Optic Towed Decoy; Countermeasure Transmitter] T-1687/ALE-70(V). Пр-ль: BAE Systems Electronic Systems (Nashua, N.H.). Navy asks BAE Systems to build T-1687/ALE-70(V) electronic warfare (EW) towed decoys for F-35. August 17, 2018. MECHANICSBURG, Pa. - Airborne electronic warfare (EW) experts at BAE Systems will provide the U.S. Navy with fiber optic towed decoys to help defend the F-35 joint strike fighter aircraft from air-to-air missiles and other incoming threats. Officials of the Naval Supply Systems Command Weapon Systems Support activity in Mechanicsburg, Pa., announced a \$70.4 million order Thursday to the BAE Systems Electronic Systems segment in Nashua, N.H., to build the T-1687/ALE-70(V) countermeasures system for the F-35. Designed and produced by BAE Systems for deployment from the F-35, the ALE-70 towed radio frequency countermeasure consists of the reel and launcher assembly, tow line, T-1687 countermeasure transmitter, and electronic and mechanical subassemblies. It also has canisters, and explosive cartridges to deploy the decoys. When deployed from the aircraft, the ALE-70's countermeasure transmitter responds to commands from the countermeasure controller located in the jet and emits waveforms to confuse or decoy adversary radars or radar-guided weapons. The system may be towed or free-flying. The Navy is making the order to BAE Systems sole-source because the company is the sole designer, developer, and producer of T-1687/ALE-70(V) countermeasure transmitters, and is the only responsible source with the technical data and requisite knowledge to meet Navy requirements. The T-1687/ALE-70(V) countermeasures system functions similarly to the AN/ALE-55 fiber optic towed decoys (FOTDs) aboard the Navy's F/A-18E/F (...). On this T-1687/ALE-70(V) order BAE Systems will do the work in Nashua, N.H., and should be finished by March 2021.

TITAN — Expeditionary Intelligence Ground Station: Tactical Intelligence Targeting Access Node (TITAN).

TITAN — Tactical Intelligence Targeting Access Node /TITAN. Army. 25.10.2019: "An initial prototype of TITAN — Tactical Intelligence Targeting Access Node — will be tested during the Defender-Europe 20 exercise next spring. The exercise is set to have about 37,000 U.S. and European troops training in 10 nations across the continent. The TITAN system, which is a scalable and expeditionary intelligence ground station, leverages space and high altitude, aerial, and terrestrial layer sensors to provide targetable data to fires networks. It also provides multi-discipline intelligence support to targeting, and situational awareness and understanding for mission command. Today, the Army has roughly 100 tactical ground stations, 13 operational ground stations and a few other dissemination vehicles to inform battlefield commanders, said Brig. Gen. Rob Collins, Program Executive Officer for Intelligence, Electronic Warfare and Sensors, or PEO IEW&S. TITAN aims to consolidate much of those capabilities to better provide "deep sensing" information from intelligence, surveillance and reconnaissance sensors from all domains. It also ties deep sensing to long-range precision strike options to defeat enemy anti-access/aerial denial environments, officials said. An industry day is scheduled for Dec. 4 at Aberdeen Proving Ground, Maryland, to further discuss the way forward with TITAN. A TITAN space prototype is expected to be delivered by early fy2022". <https://defence-blog.com/army/u-s-army-plans-to-pilot-new-tactical-space-technology-during-largest-exercises-in-europe.html>

VENONA - Secret Program VENONA. \*\*Cold War: VENONA\*\*. The National Security Agency released declassified copies of VENONA messages. All of the released documents are available for review at the Museum Library and some significant messages are part of museum displays. In February 1943, the U.S. Army's Signal Intelligence Service, a forerunner of the National Security Agency, began a small, very secret program, which was eventually codenamed VENONA. The object of the VENONA program was to examine, and possibly exploit, encrypted Soviet diplomatic communications. Analysis of the messages revealed that some of the messages were from KGB and GRU operatives working undercover in the United States. \*\*VENONA and the Rosenbergs\*\* The Museum display includes photographs of American citizens who gave information to the Soviet KGB, replicas of the messages revealing the espionage, and some World War II-era artifacts similar to those used by KGB officers. The Rosenbergs case was controversial case, due in part to the accusation and conviction of Ethel Rosenberg. VENONA messages indicate that her husband, Julius, was heavily involved in providing information to his KGB handler. At least one message shows that Ethel may have known about her husband's activities. Ethel's brother, David Greenglass, was also involved, selling details about the atomic bomb project in Los Alamos where he worked. It was David's testimony against his sister and brother-in-law that led to the conviction of the Rosenbergs for conspiracy to commit espionage. {National Cryptologic Museum Exhibit}.
